

# Information Technology Learning Journey

"The advance of technology is based on making it fit in so that you don't really even notice it, so it's part of everyday life." Bill Gates, Co-founder of Microsoft. Our intent is to promote computational thinking and digital creativity. We want our students to develop the foundations to enable them to be discerning, life-long learners in a fast-moving landscape. Students who understand that the process underpins effective ways of working in digital information technology allowing them to develop sector-specific skills and knowledge in a practical learning environment.
